Sahasawat Uengwanitchaphan

Frontend Web Developer

hoklok3@gmail.com · +66 92-363-5365 · Bangkok, Thailand · github.com/sahasawatE

Frontend developer focused on websites, interface quality, and how quickly a page becomes usable. I work in React, TypeScript, Nuxt, and Vite, and I have shipped client portals, shared component setups, and research data-collection tools.

WORK EXPERIENCES

Frontend Developer — Abbot Technology

Apr 2023 – present

Bangkok, Thailand

abbity · abbot-http-client · Nuxt 3 tooling

- Researched and established an optimal Nuxt3 project structure and ESLint configuration tailored for team efficiency; implemented an NPX script that streamlined project initialization, reducing setup time by 80% for new developers.
- Created and published abbot-http-client, a reusable TypeScript Axios HTTP client for the Abbot stack with request/response encryption, typed responses, interceptors, file uploads, and blob downloads.
- Conducted thorough code reviews for junior developers in collaboration with a senior developer, identifying key areas for improvement that led to a 30% reduction in code-related issues and enhanced overall software quality.
- Implemented a monorepo structure using TurboRepo to manage 3 React apps, 2 main packages, 1 ESLint setup, 1 TypeScript config, and 1 Tailwind config. Key features included theming consistency, accessibility support, and project building optimizations. Reducing frontend development time by 90% and improving code quality and code duplication.
- Handled the Kasikorn Asset PVD Registra project using React.js with the Vite build tool and customized components for complex requirements and saved 40% of development time; set up a CI/CD pipeline for several environments; recreated React customizable components that fit the clients' needs.

Project Manager — Abbot Technology

2026 – present

Bangkok, Thailand

- Managed delivery of two electronic data-collection tools for สธ. and ศูนย์วิจัยแม่และเด็ก, covering maternal and child health records: an analytic-hierarchy questionnaire with pairwise comparison and a consistency check before save, and a multi-round e-Delphi questionnaire with median, interquartile range, and consensus feedback.
- The tools give each expert access to their assigned questionnaire, an admin view of who has responded, and Excel or CSV export.

Automation Tester — Playtorium Solution

Jun 2022 – Apr 2023

Bangkok, Thailand

- Designed and created test cases and implemented test scripts for all scenarios based on use case flows in three different environments using Playwright and Docker. Coordinated with developers and the DevOps team to design and implement a pipeline for GitLab CI/CD for testing and deployment.

Frontend Developer (part-time) — Abbot Technology

Mar 2022 – Apr 2023

Bangkok, Thailand

- Aided senior developers in creating and maintaining a government platform called Mohpromt Station, a React application for COVID-19 vaccination and hospital services. The application includes complex UI components such as forms with steppers, socket graph data streaming, and a data encryption and decryption plugin for API communication.
- Handled Chula Hospital's system management web portal using Nuxt2 and coordinated with hospital staff to gather requirements and resolve issues. Implemented a Vue2 component from the QR code reader library and camera module. Provided data structures to API teams to ensure compatibility of complex UI component props.

UX/UI Designer (intern) — Bitkub

Jun 2021 – Aug 2021

Bangkok, Thailand

- Helped senior designers create UI components and analyze user requirements, and learned to use tools such as Figma, Jira, and the Agile process.

SELECTED PROJECTS

abbity 2026

github.com/sahasawatE/abbity

- Built a TypeScript/Node.js interactive CLI that scaffolds frontend projects by prompting for framework, meta-framework, UI library, tooling, import aliases, and package manager.
- Clones the matching template, installs dependencies, and configures selected tooling such as ESLint and Prettier so new projects start ready to run.

abbot-http-client 2025 – present

npmjs.com/package/abbot-http-client

- Published a TypeScript Axios HTTP client for the Abbot stack with typed AbbotResponse envelopes, injectable request/response encryption, custom interceptors, and X-Trace-Id / Bearer auth headers.
- Added file upload helpers, decrypting blob download support, and normalized error handling for timeout, network, and unauthorized responses.

HOK UI 2024 – 2025

github.com/sahasawatE/hokui

- Created a React UI component library based on React Aria and Tailwind CSS, with theming, layout plugins, and Thai locale support.
- Exposed reusable primitives such as buttons plus toast and dialog APIs through a shared provider and hooks.

Nuxt 3 Tooling 2024

abbot-npx-init-nuxt3 · abbot-init-nuxt3 · abbot-eslint-nuxt3

- Published an NPX initializer and Nuxt 3 + Vuetify 3 starter that standardizes project bootstrap for the Abbot Nuxt stack.
- Shared a reusable ESLint configuration package tailored for Abbot Nuxt 3 and TypeScript projects.

EDUCATION

Chulalongkorn University — B.Sc., Computer Science 2018 – 2022

Bangkok, Thailand

SKILLS

Soft Skills

Creativity, Collaboration and Teamwork, Complex Decision Making, Leadership, Time Management

Technical Skills

Create and Design database, Object Oriented Program, Figma, Git, React.js, Next.js, Vue.js, Nuxt.js, JavaScript, TypeScript, Flutter, Playwright, Cypress, SQL, Dart, Vitest, TurboRepo
