Recruitment Section, Human Resource Department

Dear Sir/Madam:

As a highly skilled frontend developer, I am writing to express my interest in the frontend developer position in your company. With over 4 years of experience, I manage 80% of the frontend projects at Abbot Technology and help the project manager control product quality. I believe my communication skill, coding skill, and the other requisites make me a suitable candidate for this job.

Across more than 16 projects I have worked with React and Vue and set my own code standards for both. My ESLint configuration and folder structure reduced unexpected errors by 70%, and packaging them as an NPX initializer cut setup time for new developers by 80%. I also reviewed my teammate's code before merging, which brought code-related issues down by 30%.

I created my own React UI library, "HokUi" (Hok is my nickname), and used that knowledge to implement a TurboRepo monorepo holding 3 React applications, 2 shared packages, and shared ESLint, TypeScript, and Tailwind configurations, which removed duplicated code and cut frontend development time by 90%.
I have also published abbot-http-client, a TypeScript Axios client with encryption and typed responses, and led the Kasikorn Asset PVD Registra project on React and Vite, including its CI/CD pipeline, saving 40% of development time.

I believe I would fit the work style, approach, and culture of your company, and I welcome the opportunity to discuss how my achievements align with this position. You can contact me on mobile or by email at any time.

Yours faithfully,

Sahasawat Uengwanitchaphan
